The video player shows a Flutter application in development. The code editor displays a Dart class `_ChooseLocationState` extending `State<ChooseLocation>`. It includes two asynchronous methods: `getData()` which simulates a network request for a username using `Future.delayed` and prints 'yoshi!', and another `getData()` which simulates a network request to get bio information and prints 'vegan, musician & egg collector!'. The console shows the output of these requests. The video player interface includes a search bar, a list of related videos on the right, and a description at the bottom.

The video player shows a Flutter application in development. The code editor displays a Dart class `MyScaffoldAppState` extending `AppState`. It includes a `build` method that returns a `Row` widget containing a `Spacer` and an `IconButton`. The `IconButton` is configured with an icon from `Icons.home` and an `onPressed` callback that prints "Button Pressed". The console shows the output of the button press. The video player interface includes a search bar, a list of related videos on the right, and a description at the bottom.
